Groundworks

RAPID APPLICATION.
REAL PROJECT EFFICIENCY.

Groundworks is a market expert in sustainable landscape materials and revegetation solutions.

We combine advanced technology with environmental expertise to deliver fast, cost-effective application, including our Ecoblanket system for effective erosion control and site stabilisation.

PROVEN EROSION CONTROL & REVEGETATION SOLUTIONS

Successful revegetation starts with soil science and data-driven planning.

Our proven systems are designed to achieve fast establishment, long-term stability, and consistent performance in even the most demanding environments.

ECOBLANKET®: SMARTER, FASTER STABILISATION

Ecoblanket is a world-first groundcover innovation that outperforms other methods and delivers ground-breaking erosion control and revegetation results. Using a non-invasive pneumatic (blown on) process, seeds are incorporated into a high quality, organic compost with a Microblend binder that can be applied to any disturbed surface.

Ecoblanket transforms sites by using specially designed, vegetated outcomes - from native grasses through to shrubs and trees. Drawing on a wide variety of native seed species, a single project can feature one or multiple seed mixes to create flexibility and height-appropriate landscape designs.

As part of the process, sites are individually assessed and from the results an Ecoblanket mix is tailored to suit specific site needs and revegetation goals. Using state-of-the-art machinery, thousands of square metres can be treated per day.

ECOBLANKET® - 3 MONTHS
